Milling spindles / H line
Rapidly up to speed:
Dynamic and robust for high loads
KESSLER spindle lines
Spindle technology with passion and expertise

The KESSLER milling spindles have a modular design.

Configure your own milling spindle model by specifying the installation position, motor, speed, bearing, lubrication and sensor system – the perfect customized solution for your individual branch and application needs.

KESSLER offers more: As an internationally successful company with extensive and highly specialized expertise, we provide comprehensive advice about the design and manufacture of individual components and project management of complex system solutions. The very latest technology and analytical processes are used to test our components under realistic conditions, so that our products help your business to maintain flexibility and its competitive edge.

Our in-house development division is supported by extensive calculation and analysis skills and covers everything from direct drive technology to the construction of all-in-one systems. Furthermore, optimized production and assembly lines provide the framework for stable processes and the superior quality of our products.

End-to-end precision from the components to the on-site service

Founded in 1923 by Franz Kessler, the company has developed to become the leading supplier of motor spindles as well as directly driven 2-axis heads and rotary tilt tables for the machine tool industry. KESSLER is proud to list many major companies from the mechanical engineering sector amongst its long-standing customers.

With the expertise of more than 95 years, KESSLER is continuously developing and optimising its products. The KESSLER product range serves a wide range of sectors, processes and applications. Close cooperation with our customers remains our key focus. The extensive product range, from hightech spindles, 2-axis heads, rotary and rotary tilt tables to motors and direct drive systems, enables KESSLER to implement customised solutions with speed and flexibility.

As your service partner, service is our matter of trust and reliability. KESSLER has an established global network of technology and service centres.
Masterpieces

KESSLER provides tailor-made spindle technology to suit your needs: Individual, flexible, modular and suitable for all areas of application

**HC line**
- Heavy cutting
- Aerospace titanium machining
- Machining of large-scale parts

**PC line**
- High speed
- High power
- High accuracy

**H line**
- Horizontal installation
- Very short acceleration and braking times

**MT line**
- Very short construction
- Used in tilting heads, turning and milling operations

**V line**
- Vertical installation
- Tilting
- Allrounder

Spindle fitting Ø (mm)

The H line is all about:

- **Horizontal machining**
- **Typical applications:**
  - Automotive industry, process machines
- **Machining of similar work pieces**
  - with similar working cycles with a high work frequency
- **Milling, drilling, thread cutting, grinding, boring of aluminium, cast iron and steel**
- **Internal monitoring of spindles** (condition monitoring)
- **Tool clamping system designed for a maximum amount of tool changes**
- **High speed:** Up to 25,000 rpm
- **High torque:** More than 400 Nm

Impress with:
- very short acceleration times
- high power
- low rotor torque of inertia
All advantages of the modular system at a glance

- Variable interface
  - Full contact plane surface or segmented plane surface

- Various spindle heads available
  - Individual shapes can be specified as required

- High degree of operational safety thanks to LEDs
  - Due to optimal illumination of the tool intervention

- Removable assembling flange

- Interface control (IFC)

- 2 or 4 bearings available
Advantages

- The most suitable COOL MOTION® motor for your individual needs: with very high torque, very high speed or high-compact design
- Various bearing lubrication systems available
- Hydraulic or electrical release unit available
- High flexibility: KESSLER rotary union for media: lubrication, dry operation, compressed air, MQL capability
- Process reliability due to extensive monitoring system
- Spindle fitting diameter and position: The spindle fitting diameter can be configured accordingly to meet your specific requirements
- High productivity due to short acceleration and braking times
- High productivity with KESSLER tool clamping system – Clamping spring package is designed for 5 million tool changes

HIGH QUALITY
MADE IN GERMANY
Milling spindle / H80

- **Spindle fitting:** Ø 170 mm
- **KESSLER COOLMOTION® motor**
- **KESSLER tool clamping system:**
  - Clamping spring package designed for 5 million tool changes
- **Rotary union:** Internal coolant supply with high volume flow
- **Cooling:** Closed with steel sleeve
- **Bearing lubrication:** Grease / re-greasing / oil-air

Spindle fitting diameter, spindle length and projection length of spindle head can be configured according to your requirements.

Choose the most suitable COOLMOTION® motor from the list of preferred motors

Modular extensions available

+ Spindle heads variable
+ Bearing 2 or 4 bearings available
+ Choose the most suitable KESSLER COOLMOTION® motor for your needs
+ KESSLER rotary union
  - Coolant
  - Dry operation
  - Compressed air
  - MQL capability
+ Spindle fitting Ø (position A and B side) variable
+ Sensor monitoring system
  - Interface control (IFC)
  - Vibration sensor
  - Clamping status monitoring
  - Leakage monitoring
  - Temperature sensor PT100
+ Segmented plane surface
+ Bearing preload variable
+ Assembling flange removable
+ Bearing lubrication
  Grease / re-greasing / oil-air
+ Standard cable outlet, connector optional
+ Holding-function for collet chuck variable
+ 2-channel rotary union

Accessories

+ Oil-air lubrication unit
+ Re-greasing unit
+ Direct lubrication on demand
Keeping up with the beat of the spindle

The KESSLER diaLOG intelligent system for data processing and condition monitoring is our solution for a connected industry.

- Integrated electrical current, temperature and vibration sensors determine the current, frequency, temperature conditions and vibration acceleration.
- An intelligent digital network system (KESSLER diaLOG) analyses and evaluates process data.
  - Detects and stores limit value exceedances
  - Interface with the network infrastructure
- The system is equipped with a TCP/IP interface for data transfer. This system transmits diaLOG data either continuously or on request to the diaLOG App or client application.

**KESSLER diaLOG**
*All advantages at a glance*

- Condition monitoring by detecting limit value exceedances
- Reduced unscheduled downtimes
- Improved operational reliability in customer processes (Process performance, operation time)
- Reduces machine downtime
- Reduces TCO (Total Costs of Ownership)
Predefined limit values are continuously monitored and logged by the system. The diaLOG App has been developed for evaluating the diaLOG data. Its functions are planned to include preventive maintenance and continuous data collection. Correction factors from the motor spindle will be communicated to the user and warning messages will be automatically transmitted to the process control system. KESSLER diaLOG incorporated in the product contributes to full process visualisation. Can be used throughout the product range with additional options for other areas.

SPINDLE MONITORING
- Live view of all diaLOG sensor data
- Analysis of functions by means of individual values

FINGERPRINT
- KESSLER fingerprint
- Detection of the as-found fingerprint (test bench)
- Comparison in the case of spindle repairs
- Commissioning fingerprint in the machine tool
- Cyclical comparison with the new fingerprint
- Data export

CONDITION MONITORING
- Display of captured limit value exceedances
- Transport monitoring
- Crash detection
- Overload detection
- Display of continuously captured data
- Load spectra
- Loading conditions
- Histogram data

PRODUCT DATA
- Display of data on the spindle type plate
- Display of converter parameters
- Data export

Available on request
**Very short tool change cycle times**

Electronic release unit

---

**All advantages at a glance**

- Higher accuracy due to reduced heat input into the machine tool, since no hydraulic unit is required
- Simple and quick to install
- Designed for at least 2 million tool changes
- Extremely short tool change time with 0.2 sec.
- Low-maintenance
- Energy-efficient
- Very fast chip-to-chip times possible due to short tool change cycle times
KESSLER is the innovation engine behind state-of-the-art direct drive technology and is renowned for powerful and energy-efficient motors with high torque density and top reliability even in high-demand applications. Practically-based simulations and individual customer calculations are a prerequisite for the development excellence of KESSLER motors.

The inverter-optimized COOLMOTION® motors are recognized for their low-loss design and enhanced heat dissipation. Innovative modifications of the motor components have enabled us to reduce the rotor and stator losses by 25%. Special construction measures have resulted in significantly enhanced heat dissipation.

The COOLMOTION® technology optimizes efficiency to a maximum.

**COOLMOTION® for the H line**
- achieves a very high torque density
- achieves very short acceleration times
- performance-enhanced motors enable a compact design

All information has been carefully compiled and checked. The printed illustrations are of an explanatory nature and may differ from the actual design. Contents may change without prior notice due to the continuous development of our products.
